

NSE STOCK MARKET

BUSINESS INSIGHTS REPORT

Data-driven analysis of the cleaned NSE equity dataset

Trading date: 08 September 2026

Executive Summary

The dataset contains 2,650 NSE equity records for the selected trading date. Of these, 1,181 stocks recorded positive daily returns, 1,437 recorded negative returns, and 32 showed no change. The average daily return was 0.11%, while the median was -0.13%. This indicates that the market had mixed participation, with more stocks declining than advancing in this particular snapshot.

Metric	Value	Interpretation
Total stocks	2,650	Equity records analyzed
Positive stocks	1,181	Stocks with return > 0%
Negative stocks	1,437	Stocks with return < 0%
Average daily return	0.11%	Mean one-day return
Average intraday range	3.66%	Average High–Low range / Prev Close

5 Business Insights

- **Market breadth was tilted negative.** 1,437 stocks declined versus 1,181 that gained, so declining stocks outnumbered advancing stocks by 256.
- **Average return was close to neutral.** The mean one-day return was 0.11%, while the median was -0.13%, showing that the typical stock had only a modest move despite some large individual winners and losers.
- **Return dispersion was high.** Daily returns ranged from -20.00% to 20.00%, highlighting substantial differences in individual-stock performance.
- **Intraday volatility was meaningful.** Average intraday range was 3.66% and the highest observed range was 24.15%, indicating that some stocks experienced large price swings during the session.
- **Lower-priced stocks dominate the dataset.** The largest closing-price band was ₹100–₹500 with 912 stocks, useful for segmentation and liquidity/volatility comparisons.

Top Performers

Top 10 Gainers

Rank	Symbol	Daily Return
1	GENESYS	20.00%
2	ESDS	20.00%
3	ASTEC	20.00%
4	WHEELS	20.00%
5	ATLASCYCLE	19.62%
6	TCC	19.45%
7	MONQ50	19.31%
8	CORDSCABLE	18.96%
9	ARVEE	18.18%
10	AGL	17.97%

Top 10 Losers

Rank	Symbol	Daily Return
1	ATALREAL	-20.0%
2	DCI	-14.4%
3	MOTOGENFIN	-12.5%
4	GSPCROP	-11.6%
5	NIACL	-11.2%
6	IDBI	-10.6%
7	CYBERMEDIA	-10.0%
8	AKI	-9.9%
9	BLUSPRING	-9.9%
10	IFCI	-9.7%

Volatility & Analytical Findings

The 10 most volatile stocks by intraday range include TCC (24.15%), followed by HAMPTON (23.92%). These observations can help analysts flag stocks for deeper risk and liquidity analysis.

Rank	Symbol	Intraday Range
1	TCC	24.15%
2	HAMPTON	23.92%
3	CORDSCABLE	23.30%

Rank	Symbol	Intraday Range
4	MOTOGENFIN	22.15%
5	MITTAL	21.74%
6	PANCHMAHQ	21.58%
7	GSPCROP	20.95%
8	GENESYS	20.27%
9	ASTEC	20.20%
10	ARVEE	20.19%

Price & Relationship Findings

The average closing price was ₹907.79, while the median closing price was ₹219.41. The difference between mean and median indicates that a relatively small number of high-priced stocks pull the average upward. The correlation between opening and closing prices was 1.00, showing a strong positive relationship in this cross-sectional snapshot.

Data-driven Recommendations

- **Use volatility as a screening factor.** Analysts should separately review stocks with unusually high intraday ranges before drawing conclusions from daily returns alone.
- **Combine performance with additional variables.** A single trading day should be combined with volume, market capitalization, sector, and multi-day historical data for stronger business conclusions.
- **Segment the market.** Compare lower-priced and higher-priced stocks separately because price distribution is highly uneven across the dataset.
- **Avoid single-day investment conclusions.** The dashboard is suitable for analytical screening and reporting, not for direct buy/sell recommendations.

Project Conclusion

The NSE dataset provides a strong real-world foundation for demonstrating data cleaning, exploratory data analysis, visualization, Power BI dashboarding, and business interpretation. The strongest portfolio story is to connect the dashboard visuals to measurable findings and clearly state the limitation that this report uses a single trading-day snapshot.
